

HOT TOPICS IN IMMUNOMEDICINE

The latest on microclots and platelet pathologies in Long/Post-COVID and ME/CFS gathering strengths, managing challenges, elevating excellence

Prof. Dr. Resia Pretorius

Head of Physiological Sciences Department
Stellenbosch University, South Africa

In this presentation Resia Pretorius will share latest findings on the nature of thrombotic endothelialitis in Long/Post-COVID syndrome and ME/CFS. Novel methods to study amyloid microclots will be discussed, and it will be debated if microclots are indeed “clots”. The presentation will also include a discussion on their presence in other inflammatory diseases; and if we need to, in fact, care that these deposits are present or not. Latest research of other groups on the topic will also be shared.

Friday, 26 July 2024, 1:00 pm on Zoom
